

## "Hot Water Sanitizing" Dish Machine; Sanitizing Temperature- Daily Log

- Use temperature validation indicator stickers or maximum registering thermometer to validate that dish machine is properly sanitizing. The built in gauge read out should be **≥ 180°F** in the chamber and must be validated to be **at least 160°** at the dish surface.
- Under validation record **pass or fail** if using color changing stickers. If using a calibrated maximum registering thermometer record the **actual temperature**.
