2012-2013 Influenza Reporting Overview
Carson City, Douglas and Lyon Counties

Last year the region saw a 33% increase in the number of reported influenza in the region (Figure 1). For last year the increase of reported influenza cases followed the nationwide increase in reported ILI reports monitored by CDC. (Figure 2)

The types of influenza reported were different for the past two seasons. 2012-2013 saw about the same number of Influenza A, rapid test only reported to CCHHS while there was a threefold increase in the number of Influenza B, rapid test only as compared to the 2011-2012 season. (Figure 3)
